ANNOTATIONES SPECIALES IN OBSERVATIONES MANHEIMENSES.

JANUARIUS.

Postquam diebus 7 & 8 nix larga ceciderat; subito nocte sequente frigus tam intensum obortum est, ut mercurius in thermometro ad 14 gradum infra 0 constringeretur.

Die 9. Frigus circa meridiem aliquantum remisit; circa vespertum remisit magis magisque, & ita subito, ut circa meridiem diei 10 mercurius in thermometro supra 0, 1°, 6 dec. haerens observaretur.

Diebus 13 & 14 frigoris reditus; sed uti repente exortum fuit, etiam subito remisit.

FEBRUARIUS.

Circa hujus mensis medium jam tertia vice inchoavit aspera hiems, quae duravit fere ad finem. Maxime frigidi dies erant 17, 18 & 19.

APRILIS.

Die 5. Tota nocte hunc diem antecedente, saeviebat turbo vehementissimus e SSW. Coelum totum nubibus nigerrimis obscurabatur; tonitru eminus audiebatur aliquoties. Ventus tempore matutino quidem remittebat aliquantum; altero vero die circa hor. 2 pom. exoriebatur tanto procellosior cum tempestate fulminea. Ter audiebatur tonitru absque omni fulgure. Pluvia commixta grandine maxima vi delapsa est. Toto fere tempore pomeridiano scintillae electricae in magno nubium Electrometro torrentis adinstar prorumpebant.

19. Hora 12 $\frac{3}{4}$ pom. & postea saepius, nubes nigerrimae praetervolantes imbrem maxime electricum dederunt; circa vespertum ventus exurgebat procellosus, per totam noctem durans.

20. Mane saepius pluvia, post meridiem nix, nocte vero glacies & pruina sequebantur.

MAYUS.

Die 21. Hora 5 pom. coelum ab occidente ad septentrionem usque nubibus fulmineis obduci coepit. Saepius visam est fulgur, & tonitru auditum eminus. Hora 6 magis appropinquans tempesta ventum procellosum praemisit pulveres & arenam in plateis & viis publicis extra urbem ita aërem circumgyrans, ut in distantia trium pedum nihil dignosci potuisset.

JUNIUS.

ANNOTAT. SPECIALES IN OBSERV. MANHEIMENSES.

JUNIUS.

Die 5. Hodie tempore matutino tam spissa nebula observata fuit, quae a solis radiis intensioribus rubore tinctis tantum penetrari potuit.

25. Hora 8 $\frac{1}{4}$ mat. nubes e W nigerrimae advehebantur, concomitante vento procelloso W, grandinem solutum dejecerunt, & ignem fortissimum electric. in Electrometrum effuderunt.

26. Tota die nubes fulmineae praeteribant.

30. Hora 2 pom. ventus procellosissimus exortus est, qui pulveres per aërem ita circumagitabat, ut nebulam spississimam aemularet, fulguravit, tonuit & delapsus est imber. Therm. post tempestatem ad 13, 2 depressum inventum est; hyg. vero ad 41, 4.

JULIUS.

11. A summo mane totus horizon vapore spississimo tectus erat, qui mansit per tot. diem.

19. Hora 3 pom. ex omnibus coeli plagis tempestates fulmineae exurgebant. Atrocissima appropinquabat e SW & obscuritatem nocti similem induxerat, fulgura & tonitrua continua fuere. Largissimus delapsus est imber, & turbo vehemens saeviebat. Durante tempestate barometrum subito lineam ascendit, sed subito etiam ea remittente descendit.

AUGUSTUS.

Die 20. Totum coelum nubibus fulmineis saepius de die tectum fuit. Magna fluidi electrici copia in Electrom. observata est.

23. Tota die nubes tonitruae nigerrimae praeterlabuntur.

SEPTEMBER.

Die 1. Hora 9 vesp. observabatur aurora borealis rubro flavescens, cujus radii quasi e centro in SW haerente exibant; & ad Zenith usque affurgebant.

5. Mane circa h. 5 saeviit ventus validissimus ex W, nubes nigerrimas fulminosasque advehens.

13. Phaenomenon insolitum h. 9 vesp. — Videbatur scilicet h. 9 vesp. coelo plurima parte nubibus nigris spissis tecto, fulgur versus ONO insignis largitatis, quod non in forma ziczac & in tempore momentaneo, sed lente festinans aërem percurrerebat. Splendor, seu claritas hujus fulguris tanta fuit, ut per illam cerearum lumina in conclavibus omnino obscurarentur. Vix cum evanuerit phaenomenon hoc, audiebatur tonitru propinquum & vivax, & rapidissime aëra pervolvens.

Die 15.

Die 15. Circa vesperum apparatus nubium nigerrimarum in SW, quae occidente sole colore rubro tingebantur; multae tamen profundius percurrentes colorem hunc rubrum non induere, sed uti fumus apparuerunt & fumi adinstar conglomerabantur, inque cursu iterum disparuerunt. Eodem tempore tota coeli plaga in NW velo nubium nigro contexta fuit.

16. Hor. circ. 6 vesp. tempestas fulminea in SSW haerens, pluviam electricam adduxit. Barom. 28, 1, 0, vent. N.

21. Toto tempore matutino ad meridiem usque coelum plurima parte nubibus atris tegebatur; raro apparuit sol. Hora 2 pom. advehebatur tempestas maxime fulminosa, fulguribus & tonitribus horrendis se magnopere excipiens. Veloci cursu agitabatur. Barometrum, quod ad 27, 5, 7 descenderat, appropinquante tempestate ad 27, 8, 0 ascendit, remittente vero tempestate, iterum descendebat.

28. Amoena dies erat; plures adhuc visae sunt *Hirundinum* L. species. Hora 8 vesp. aurora borealis rubro flavescens.

19. Mane circa h. 8 turbo 4 grad. complet per vices, meridie tempestas procellosa, cum imbribus nubes saepe valde obscurae.

NB. Turbines diebus 5, 6, 7, 10, 11 & 19 hic in vicinia multa tecta dejerunt, arbores evulserunt, domos totas prostraverunt; praesertim molendina pneumatica; quatuor milliariis abhinc, dicitur templum muratum magnam rimam in oppositis parietibus accepisse, ex quo suspicio orta verum terrae motum fuisse.

30. Vesp. h. 9 nubes tenus albae quasi radii divergentes, in N ad perpendiculum versus O autem magis ad horizontem successive inclinati, versus W paucissimi tenues radii albi, Luna ferena, dein Luna tecta, & segmentum serenum h. 11 in N ad horizontem.

DE DECLINATIONE ACUS MAGNETICAE.

Declinatio acus magneticae eadem est sensibilibiter, quam fuerat annis praecedentibus, & 19 grad. $\frac{3}{4}$ circiter mihi visa fuerat anno praecedente paulisper minor; verum idoriebatur ex eo, quod diligentius observaveram circa medium annum, & annis praecedentibus versus finem anni; & vidi postea cl. *Cassini* observationes per multos annos declinationes & tempore fuisse paulo minores.

ANNOTATIO.

Die 21 Julii h. 2 pom. horrida tempestas ingruit, pluribus in locis versus meridiem sitis, nec a nobis admodum remotis emissa grandine arva devastans; at hic loci non nisi imbris fufis ac vehementi procella ex WS per dimidiam fere horam saeviente absque ulteriori damno transiit.

Bracteae quidem indicabant saltem, initio, NO; at directio nubium erat SW: fors contrarii venti spirarunt.

CONDITIO ANNI GENERALIS.

ANNUS hic 1792 tempestates tulit earum naturae convenientes; hiemen frigidam ac nivofam, aestatem calidam, ver atque autumnum temperatos, hinc abundantia frugum ac fructuum, nisi quod his nocuit pruina diei 22 Aprilis, quae etiam in Gallia, notante cl. P. COTE, locum habuit; illis vero, peculiaribus nec paucis locis, grandines vastatrices.

Messis mature peracta est, incepit enim die 13 Junii.

Terrae motus exauditi toto fere mense Martio in provincia Forojulensi, in Etruria, atque alibi; item die 30 Sept. in collibus Vicentinis.

Aurora borealis unica, sed pulcherrima, visa est vespere diei 12 Decembris.

Die 11 Sept. nocte sequente prorupit ventus vel turbo, qui judicari potest recursus exitiosi turbinis, qui annis 36 retro (1756 d. 7 Aug.) grassatus est in hisce provinciis, editis stragibus miris; sunt ideo Cycli lunares, annorum 18 dierum 11 paulo plures.
